AI Assistants Market Report 2025

The global market for AI research assistants grew strongly in 2025, driven by enterprise adoption of document analysis and summarisation tools.

Key vendors include OpenAI, Anthropic, Google and a long tail of open-source projects built on models such as Llama and Mistral.

Pricing pressure increased as free tiers expanded; average enterprise seat prices fell by roughly 15% year over year.

Risks: regulatory scrutiny in the EU, rising compute costs, and accuracy concerns in high-stakes domains.
